**Election/Restriction**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-5 are drawn to an oligonucleotide, a less than full length nucleotide sequence, classified in class 536, subclass 24.2 for example.

II. Claims 6-23, 28-41 are drawn to a recombinant nucleotide sequence comprising a concatenation of nucleotide coding for a plant protein reserve, expression vector, a method of transformation, and resulting transgenic plants, classified in class 800, subclass 278 for example.

III. Claims 24-27 are drawn to a protein, classified in class 530, subclass 300, for example.

2. The inventions are distinct, each from the other because of the following reasons:

a. Each invention is drawn to a molecularly and a biochemically divergent products and processes not required by the other.

b. Group I is drawn to a an oligonucleotide, a less than full length nucleotide sequence. Not related to the invention of group II which requires the use a full length

nucleotide sequence. Furthermore, the plant expression vector, method of transformation and resulting of transgenic plants of group II are not required by inventions of either group I or III.

Not related to group III which can be made by methods other than the use of the oligonucleotide of group I or the nucleotide sequence of group II, such as chemical synthesis. As such, the invention of each group is independent and patentability distinct. Clearly, they are independent since you could practice one invention without practicing or infringing any of the others. Similarly, each is patentability distinct since they constitute different products which can each support its own patent.

As such, the invention in each one of these groups require separate search and it be burden on the Examiner to examine more than one invention in one application.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their divergent subject matter, classification, and fields of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

amendment of inventorship must be accompanied by a diligently-filled petition under 37 CFR 1.148(b) and the fee required under 37 CFR 1.17(h).
